

Compare Excel v1.0

Compare Excel is a tool that allows you to compare two xls files. It's a very effective tool to find out typically what has changed amongst different versions of an excel file. You have facility to compare all sheets of two excel files or it allows you to select sheets for comparing. The comparison report generated is a xls file which indicates which cell has changed.

The comparison can be performed Row wise or column wise based on how data is arranged in your xls. The user has option to hide matching rows/columns depending on the mode of comparison.

For every cell in a sheet, the tool provides option to compare

- Values
- Comments
- Formulas
- Font
- Number of decimals
- Alignment

The tool also provides a facility that can highlight cells where differences are found. The user can specify the cell color to mark the changes.

The tool also has a feature which hides matching rows/cols , which leaves on differences visible to user when he/she opens xls after comparing.

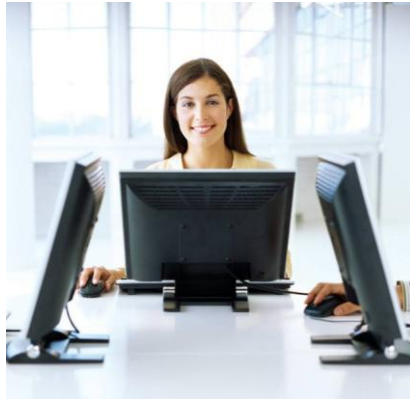

The user also has option of generating comparison result report on a single sheet for all selected sheets or it can generate separate report sheet for every sheet being compared.
